I read the schematics and see references to different
destinations for the TM-733. I am guessing that by removing the various
resistors listed, I can make the modifications to give the radio the
expanded TX & RX. Have you received any information about the mods.
available. I did make the "GREEN WIRE" mod. by cutting both wires. It
made the following changes:

VHF: Original RX range: 118.000 - 173.995
New RX range: Same as original

Original TX range: 144.000 - 147.995
New TX range: 142.000 - 151.995

I am in the market for a dual/multi band all mode transceiver and am considering the Kenwood TS790, Icom 820H, and Yaesu 736R. I would appreciate hearing any opinions about the relative strengths and weaknesses of each of these rigs. Each one costs a lot of \$\$ and I want to go into this with as much information as possible. If I make a mistake the resulting marital stress will be hard to deal with.

To: ham-equip@ucsd.edu

I have access to a large supply of tubes of all types.
E-mail the tube ID's you need and I'll e-mail availability and prices (there are literally thousands...too many to list).

FT-530 mods can be found on:

oak.oakland.edu

in /pub/hamradio/mods/yaesu

To answer the concern about understanding why TX, when the mod is done to extend RX, you get TX as well.
